

# Johnson Controls Institute Course

## Cardkey S300/320 Self-Study Course (P62)

**Learn at your pace! Build your knowledge of the foundational architecture, features, installation, basic operation, configuration, and troubleshooting of Cardkey S300 and S320 Series field panels, along with their common reader and Input / Output modules.**

Security personnel who use the S300 as a stand-alone access control system or the S320 within the P1000 or P2000 will find this a great teaching tool for building proficiency and getting students ready for the Cardkey P2000 Configuration, Operation and Maintenance Course (#4002). This self-study course is recommended for students with previous P1000, P2000 or D600 / D620 training who wish to upgrade their knowledge to this current Cardkey controller. To receive the maximum learning benefit from this self-study course, it is recommended that an S300 or S320 panel be available for completing this training. Each course includes one each: S300 User Manual, S300 Installation Manual, S320 Installation Manual, Exam Booklet, Self-Study Guide and Workbook. (The original exam booklet must be returned for grading and certification.)

**(approximately 6-8 hours)**

### Topic Outline

- Introduction to S300/S320
- Introduction to Card Readers
- S300/S320 Basic System Components
- Add-on Modules
- S300 System Programming
- Troubleshooting and Commissioning
- S320 CPU Board
- S320 Host Connectivity

**Cost: \$65.00**
