

Johnson Controls Institute Course

Digital Vision Network Operations (CBT29)

Learn about your Digital Vision Network (DVN) and how to use the DVN Remote Control interface to control cameras, work with recorded video, modify recording schedules, and handle alarms.

This course introduces topics in an easy-to-follow way and provides demonstrations and printable steps for the related procedures.

The hands-on exercises let you apply the new learning immediately using one of your very own facility's RemoteControl workstations to investigate how the DVN is monitoring your facility. You can use any parts of this course later as a reference so that the learning and practice can continue even after you have completed the course! This course is for guards, operators, supervisors, or others who need an introduction to the DVN system. (©2005 Johnson Controls, Inc.)

Topic Outline

- DVN Basics
- Navigation
- Controlling a Pan Tilt Zoom Camera
- Playing Back Recorded Video
- Searching Recorded Video and Using Filters
- Saving and Editing Images
- Handling Alarms
- Modifying Recording Schedules
- Monitoring Auxiliary Inputs
- Controlling Image Resolution
- Controlling Bandwidth Use
- Audio
- Priority Boost
- Creating Users

Cost: \$395.00
