

Johnson Controls Institute Course

HVAC Introduction (LM17)

Explore the fundamental concepts, theories and principles of the building environment industry in this comprehensive introduction to HVAC Systems and controls. This interactive CD-ROM focuses on the relationships among environmental requirements, building mechanical systems, and the controls that regulate mechanical systems. The built-in tracking system will help individual users keep track of what they have covered and the test scores they have achieved. The accompanying workbook provides much more than just a place to record notes -- it contains questions to prompt critical thinking, review and application of the concepts presented online. Topic Outline

- Environment
 - Temperature
 - Humidity
 - Air Movement
 - Air Purity
- Systems
 - Heating Plant
 - Cooling Plant
 - Distribution Systems
 - Terminal Systems
- Controls
 - Control Systems Components
 - Classification
 - Typical Control Loops

Cost: \$99.00 (price includes the CD-ROM and workbook)
