

**Premier** 25-50 Tons

# Commercial Rooftop Units from Johnson Controls

## Unmatched efficiency

Premier rooftop units offer **class-leading standard efficiency** levels and meet aggressive Department of Energy (DOE) 2023 energy efficiency standards with options to meet 2019 CEE highest tier ratings. Standard, uneven, tandem compressors provide up to 15 steps of staged control – the highest level of staging – resulting in greater up-front savings and improved comfort. Additional modulating options, including compressors, further improve efficiency.

## Hassle-free specification

Premier rooftop units are engineered to save money, right from the start, by combining **the most complete range of factory options** within a streamlined design process. Multiple supply and return airflow path configurations, modulating heat and refrigeration options and serviceability features are integrated within a selection tool that makes unit configuration and specification easier than ever.

## Best-in-class controls

Premier rooftops get contractors off the job faster, with **easier to use controls** that include startup, commissioning and air balance wizards to simplify the process. In addition, Smart Equipment controls – with a full array of user-adaptable parameters and seamless integration with our *Verasys*<sup>®</sup> building controls systems – help maximize control for greater efficiency, extended equipment life and reduced operating costs.

## Greater peace of mind

We back Premier with **industry-leading warranties**. A 1-year parts warranty is standard on all Premier units, along with either an earned 6-month or earned 1-year promotional labor warranty (vs. the industry-standard 30-day labor warranty) when started by a certified contractor.

## Standard and optional feature highlights\*

**Bold text** indicates modulating feature.
