

RENTAL SOLUTIONS

Temporary cooling solutions to meet your critical needs

Rent from the experts in HVAC

Nobody handles your temporary cooling needs better than Johnson Controls.

Single-source accountability

With Johnson Controls, you're working with an organization that uniquely combines equipment selection, application engineering, project management and service expertise. So you can be sure of proper assessment, installation, setup, commissioning, controls integration and ongoing maintenance to meet your needs on time, all the time. When you need temporary cooling, don't risk delays, improper equipment configuration, or miscommunication by dealing with a third party.

Technical expertise

As one of the industry's leading manufacturing and service organizations, Johnson Controls ensures the success of your rental solution. No one can match the ability of our skilled, factory-trained and supported personnel.

Quick response

Because your business is on the line, we focus on providing the quickest response time to meet your requirements. Our large rental fleet is strategically placed throughout North America to ensure fast delivery and setup. With over 150 sales and service offices throughout the U.S., we can provide a solution whenever and wherever needed.

A solution for every temporary cooling need

Whether a chiller goes off-line for maintenance or just goes down, Johnson Controls can meet any temporary cooling need.

Emergency cooling

When your cooling system goes down, you need a provider who stands accountable for equipment and services that will get you up and running. Johnson Controls has extensive experience with critical cooling systems, so we can deliver a solution to minimize downtime – and finger pointing.

Routine maintenance

A Johnson Controls rental chiller gives you added assurance when you take a chiller off-line for routine maintenance by allowing operations to continue while procedures are performed. Because there is no need to rush getting the unit back online, you have the peace of mind that maintenance is being done correctly the first time.

Chiller replacements

When replacing equipment, a Johnson Controls rental chiller allows operations to continue undisturbed while new equipment is being ordered and installed. Additionally, before buying a new chiller, you can rent the same capacity equipment and make sure you're getting exactly what you need.

Additional cooling capacity

When additional capacity is temporarily required, such as seasonal heat waves and business peaks, a Johnson Controls rental chiller supplies cost-effective additional cooling. A rental chiller lets you conserve capital instead of purchasing equipment used only at certain times of the year. Johnson Controls can help you identify additional ways a rental chiller can help your business.

Capital constraints

When capital budgets are threatened, renting cooling equipment provides access to the newest, most efficient HVAC technologies without making a long-term financial commitment to purchase. Temporary cooling can bridge the gap until the economic climate stabilizes and budgeting issues can be resolved. It can also reveal opportunities to further improve the bottom line including energy efficiency improvement, elimination of maintenance and repair expense and guaranteed uptime, to name a few.

The right range of products and services

EQUIPMENT

PROCESS COOLING

Screw chillers for demanding low-temperature or constant-duty applications.

CENTRIFUGAL CHILLERS

All 500 & 1000 ton water cooled centrifugal chillers are outfitted with YORK® OptiSpeed® Variable Speed Drives which ensure optimal chiller performance based on various load and operational conditions and can deliver up to 30% energy savings.

COOLING TOWERS

Rental cooling towers ensure proper heat rejection.

CHILLER PERIPHERAL EQUIPMENT

Pumps, hoses, valves, piping, and couplings.

AIR-COOLED CHILLERS

For applications where water isn't readily available.

ROOFTOP UNITS

Compact packaged chillers, air conditioners and air-handling units for the roof.

CUSTOMIZED AC/HEAT

Indirect high-static and low temperature.

POWER

Temporary diesel power generators, distribution panels, power cables.

CUSTOM MODIFICATIONS

Johnson Controls has the expertise to configure equipment to specific applications – we're not an off-the-shelf rental company.

ENERGY EFFICIENCY

As the manufacturer, we offer one of the newest rental chiller fleets (average age of less than 4 years), ensuring that your chiller is one of the most reliable and energy efficient in the rental industry.
