

Save Lives by Improved Monitoring

Johnson Controls Hand Hygiene Solution

Compliance Made Simple, Accurate, and Effective

Healthcare professionals understand how critical hand hygiene is to the health and recovery of their patients. But often with the ever-increasing challenges of patient care, priorities and patient volumes reinforce the need for speed which in turn can result in poor and/or inconsistent hand hygiene. Johnson Controls has developed a powerful, yet non-invasive solution that respects the role of the healthcare worker while requiring and reinforcing hand hygiene compliance – simply, accurately and effectively.

Our breakthrough solution uses patented in-room technology to reinforce hand hygiene, monitoring and reporting on both the WHEN and the HOW of compliance.

Changing Behaviors for Effective Compliance

We can help you create an effective change management program based on the Hand Hygiene Solution. With data from the system, change leaders, healthcare management and individual healthcare workers can view and monitor results, providing a complete view of hand hygiene compliance in just a few clicks. Data can reinforce correct behaviors and provide content for your education and change management efforts.

How does it work?

Real-time, non-compliance notifications to healthcare workers at the point of patient care (WHEN) and the point of product use (HOW).

WHEN

Readers are installed in the hand hygiene patient zone and above sinks. Healthcare professionals wear a small tag adhered to their standard employee identification badge. The system reminds healthcare workers, with a gentle audible alert from their badge, if they do not perform compliant hand hygiene entering/exiting a patient's room or according to the **5 Moments of Hand Hygiene**.

HOW

The system determines if proper hand hygiene technique is being performed. If it is not, healthcare workers are alerted, in real-time, to effectively change non-compliant hand hygiene technique.

APPLICATION

All compliant and non-compliant data is captured and pushed to the cloud where it can be viewed via a simple dashboard and shared with change leaders, healthcare management, and individual healthcare workers.

The Johnson Controls Hand Hygiene Solution is available with an as-a-service model with Johnson Controls providing hardware and software on site. You have no up-front capital expenses and no waiting for annual budget cycles to be able to implement.

Solve your compliance challenges simply, accurately and effectively.
