Product Security Advisory

**February 3, 2022**                                                        JCI-PSA-2022-01
                                                                          CVE-2021-44228
                                                                          ICSA-22-034-01

**Overview**
Johnson Controls has confirmed the presence of a vulnerable version of Log4J, which may be exposed via DSC PowerManage. PowerManage 4.8 customers are encouraged to upgrade to the latest PowerManage release to prevent any remote code execution. Alternatively, there is a patch that can be applied.

**Impact**
An attacker could enter malicious input and potentially allow remote code execution.

**Affected Versions**
- PowerManage versions 4.0 to 4.8

**Mitigation**
- Apply a patch to PowerManage versions 4.0 to 4.8
- -or- upgrade PowerManage to version 4.10
