Introducing Metasys Release 14.1

Improve energy management, increase interoperability and simplify administration.

The latest Metasys release includes new and better ways to access and visualize data, improve building performance and make your job easier. Advance energy goals with enhanced dashboards and reporting. Easily integrate and manage building systems with open BACnet integration. And build on our industry-leading user experience to increase productivity, optimize daily operations and reduce costs.

Energy dashboards & reporting	Open BACnet integration	Metasys user interface enhancements	Faster, simpler licensing workflow	More flexible architecture

The power behind **your mission**

Upgrade to gain key features

NEW: Energy dashboards & reporting

Out-of-the-box, intuitive dashboards take you quickly from data to insights to action. Operators can review energy use by type and space, identify energy hogs using ranking visualizations, spot consumption patterns with heatmaps, and detect trends with filters for specific spaces and times. Three-click data access supports faster, data-driven decisions to meet energy and sustainability goals.

NEW: Open BACnet integration

Metasys servers now offer BACnet Advanced Workstation capabilities to seamlessly integrate third-party BACnet compatible devices without additional hardware. Operators gain the tools to configure, commission, monitor, troubleshoot and modify an entire BACnet system — easily managing HVAC, lighting, security and other building systems from one interface.

Metasys user interface (MUI) enhancements

The world-class Metasys user interface offers intuitive dashboards, robust graphics, cybersecurity tools, fault triage and more to give building operators an edge. Get key data in fewer clicks with enhancements like these:

- Electronic Demand Monitoring offers real-time tracking to proactively manage demand and reduce costs at peak demand.
- Mean Kinetic Temperature calculating and reporting, now offered in MUI, helps meet strict compliance requirements.
- Spaces Manager online editing lets you quickly reconfigure spaces without tools or downtime.

NEW: Faster, simpler licensing workflow

For systems that connect to the internet, all Metasys products and bundles can now be licensed entirely through the Licensing Portal. This new online workflow streamlines the licensing process and significantly reduces the time required to license products and bundles, resulting in greater efficiencies.

Certification and compliance enhancements

Metasys is the building automation system of choice for operators facing strict compliance requirements. Servers and engines are updated to BACnet protocol revision 19. And Metasys for Validated Environments, now supported exclusively through MUI, includes IPv6 support as well as remote notification configurations that enhance real-time monitoring and response.

System and architectural flexibility

Expanded deployment options, operating system (OS) agnostic server, and enhancements to the USB-to-Ethernet adapter streamline installation and integrations.

System and architectural flexibility

Expanded deployment options, operating system (OS) agnostic server, and enhancements to the USB-to-Ethernet adapter streamline installation and integrations.

Connected Workflow enhancements

Streamline equipment controller commissioning via CWa mobile application, now supported on Windows OS.

It's time to act

With Site Management Portal at end-of-life, it's time to transition to the world-class Metasys user interface. We're ready to work with you on a Metasys 14.1 upgrade strategy that fits your installation and budget. Ask your Johnson Controls representative about limited-time upgrade incentives, or visit **johnsoncontrols.com/building-automation-and-controls/Metasys.**
