

# Leap forward with Metasys 15.0

Empower your operations, streamline navigation and simplify administration.

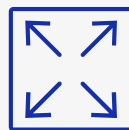

The latest Metasys release means better ways of viewing data and managing data, enhancing your building performance and making your job easier. Make informed decisions with a more intuitive interface that provides advanced analytics. Enjoy flexible architecture that can be scaled to any building or campus. And experience Metasys, a time-tested solution that optimizes building performance, enhances occupant well-being, mitigates risk and powers sustainable operations.

Intuitive user interface  
with browser-centric  
design

& Reporting

Scalable, flexible  
architecture

True openness

Enhanced  
cybersecurity

Multi-server  
redundancy

Technician  
empowerment

Future-focused  
design

# Upgrade to gain key features

## NEW: Intuitive user interface with browser-centric design

Make everyday tasks faster, clearer and more impactful. Metasys now offers a more intuitive interface with advanced analytics so you can make informed decisions about energy use, improving your experience. You can configure spaces—and now equipment—over a browser with no toolset, outside technician or downtime needed. Imagine, what once took 90 minutes will now take 5 minutes—an efficiency gain of 94.44%.

Additional improvements include:

- **Metasys UI** allows you to personalize your browser view instantly, empowering your team with greater autonomy while enhancing operational flexibility.
- **High-resolution graphics** elevate customization and clarity for a significantly improved experience.

## NEW: Energy Dashboard & Reporting

With the Energy Dashboard & Reporting app, you'll enjoy instant dashboard access in three clicks so you can fast-track energy insights—and start energy monitoring. This will allow you to enhance fault detection and diagnostics and reduce downtime.

## NEW: Scalable, flexible architecture

Architecture can now be scaled to any building or campus. New deployment options give smaller buildings robust, local control—while larger, complex facilities can manage different areas or systems all under one interface. And Metasys now supports up to 50,000 objects or 1,000 directly connected IP devices, meaning lower upfront costs, simplified installation and easier long-term maintenance. Streamlined configuration with scalable server capacity consolidates system architecture and reduces reliance on additional hardware.

## True openness

Expand your reach by integrating with multiple technologies and brands. Metasys can now function as a controller within BACnet networks, providing new options

for integration and control. You'll appreciate stronger interoperability with third-party BACnet devices and more reliable system performance, providing access to advanced data analytics, custom application development, and integration with other building systems.

## NEW: Enhanced cybersecurity

Cyberhealth isn't just monitoring—it's strategic protection to ensure you stay compliant, secure and ahead of threats. The Cyberhealth Dashboard now delivers deeper, more intelligent visibility into your BAS infrastructure—helping you proactively manage risk and strengthen system resilience. With enhanced logic and updated security analysis, you can:

- **Identify engines running unsupported firmware** with improved detection logic across your site.
- **Receive updated policy recommendations** for engines using insecure configurations like HTTP communication.
- **Spot vulnerabilities faster** and take decisive action to mitigate risks before they impact operations.
- **Make informed decisions** with clear visibility into engine details and software support status.

## NEW: Multi-server redundancy

Reduce the risk. Metasys engines now support multi-server redundancy, sending trends, alarms, events and audits to one or two backup servers—so critical data is never at risk.

## NEW: Technician empowerment

Give your technicians the control they need. On-the-spot scheduling gives them real-time, location-based control to streamline workflows, accelerate maintenance and boost agility. Live deployment allows technicians to add integrations without rebooting, cutting downtime by 90 minutes.

## Future-focused design

Metasys is constantly updated to meet changing needs, preserving your investment while adding functionality with an eye toward the future.

### *Transform building performance with Metasys 15.0*

We're ready to work with you on a Metasys 15.0 upgrade that fits your installation and budget. Talk to your Johnson Controls representative today or visit [johnsoncontrols.com/building-automation-and-controls/Metasys](https://johnsoncontrols.com/building-automation-and-controls/Metasys).
