Service Van

Did you know?

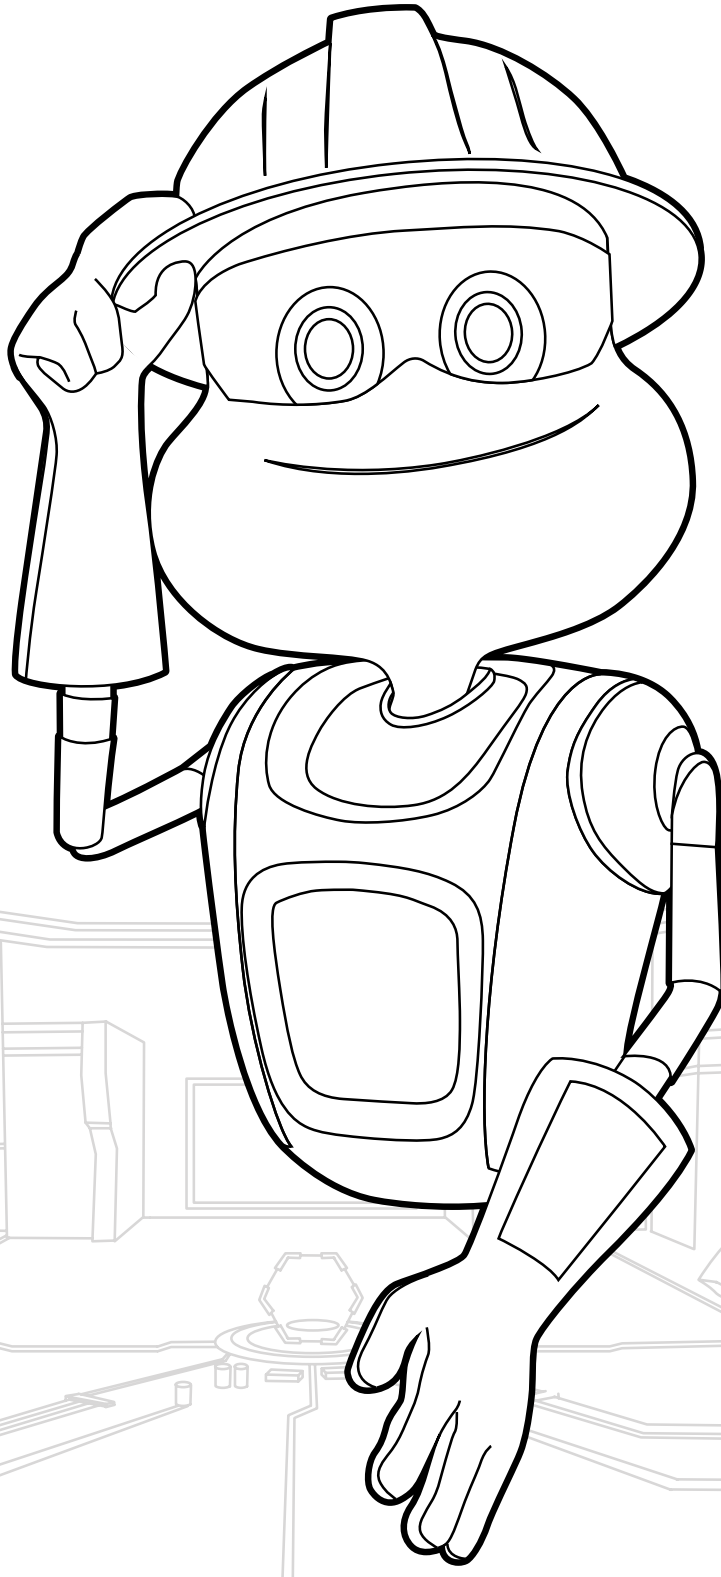

Johnson Controls vans help to bring services to buildings around the world – empowering the mission of our customers!

“Hi

I am Mr. Building Automation System, but my friends call me Mr. BAS. I get to decide if it is too warm or too cool inside. Then, I tell the rest of the Heating, Ventilation, and Air Conditioning System (HVAC System) to make adjustments.

”

Hi

I am Mr. British Thermal Unit, but my friends call me Mr. BTU. I am the heat in your house. In the Winter you want more of me, but in the Summer you want less. I always travel from warm spaces to cooler ones.

“

Hi

I am Professor Frio and I use a liquid called refrigerant to cool the house, which forces Mr. BTU out.

”

Hi

I am **Amelia Airflow**. I am fresh air moving through your house. In the summer I come in and carry Mr. BTU to Prof. Frio so they can leave the house and make it cooler.

On a lovely
Summer Day...

...when we all sat in our
living room...

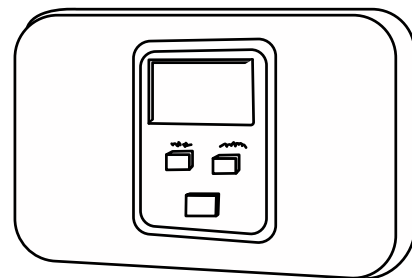

and were feeling very very hot –
Thanks to our summer guest, Mr. BTU!

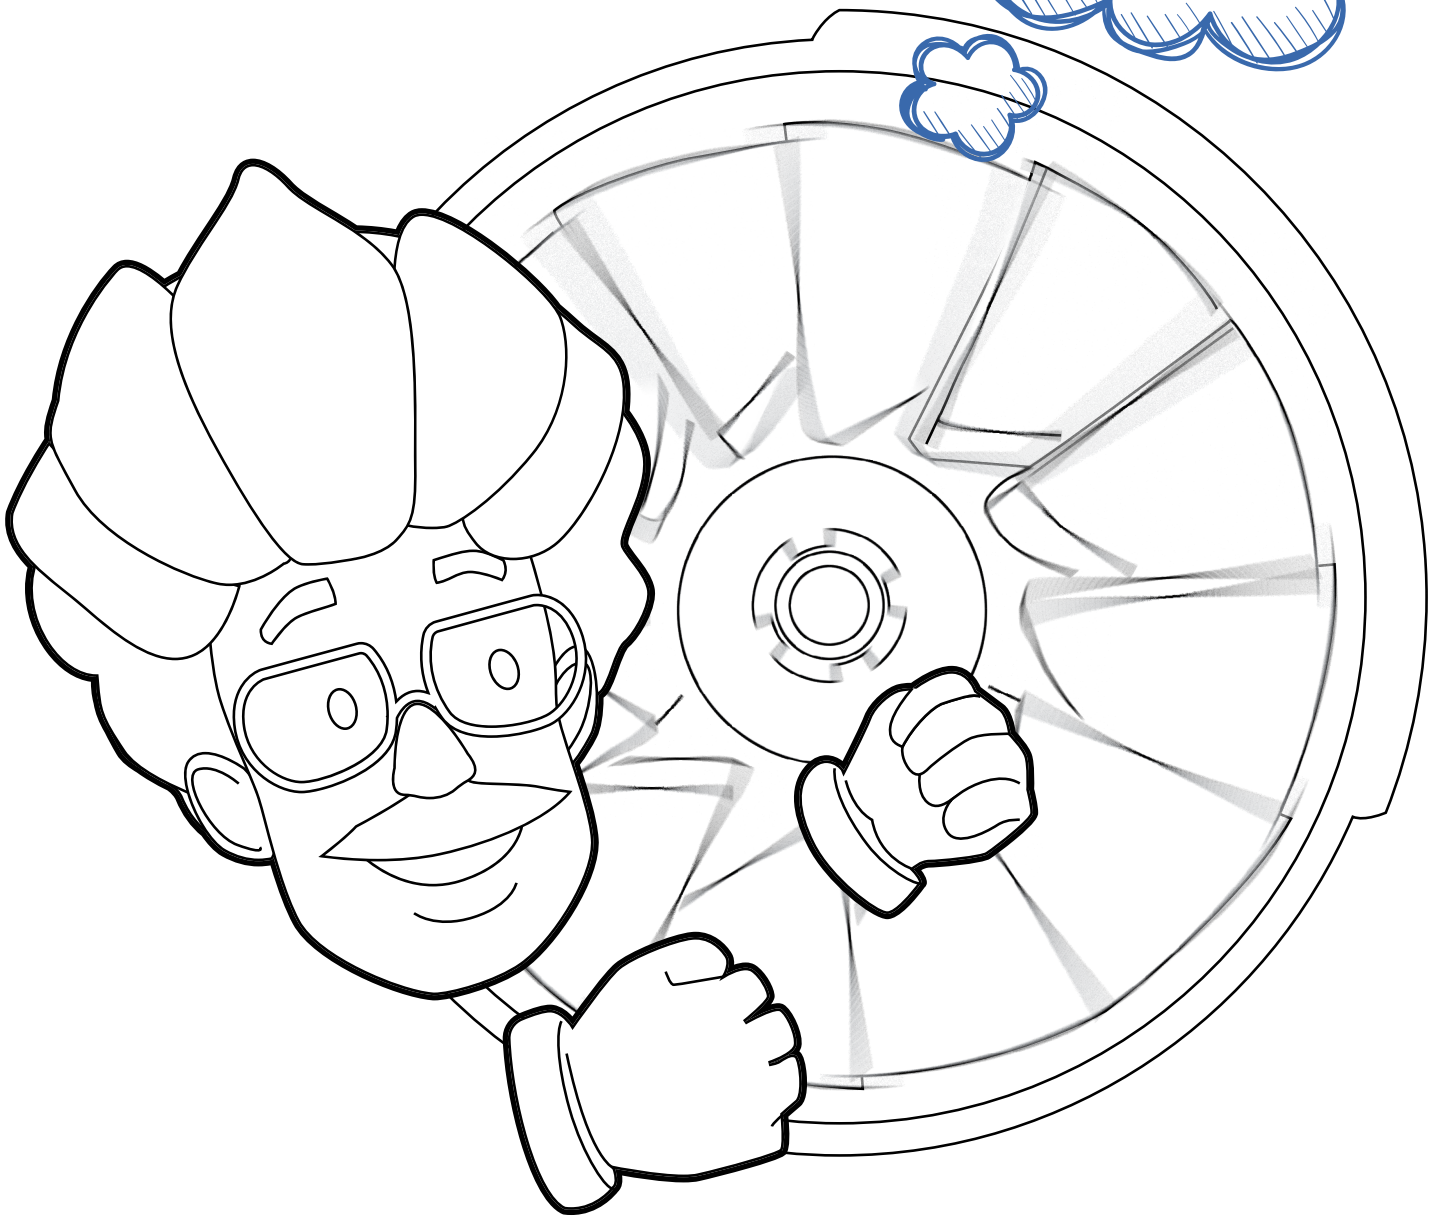

Mr. BAS to the rescue!

I need to
turn on the
cooling system...

Finally, time
to go to work!

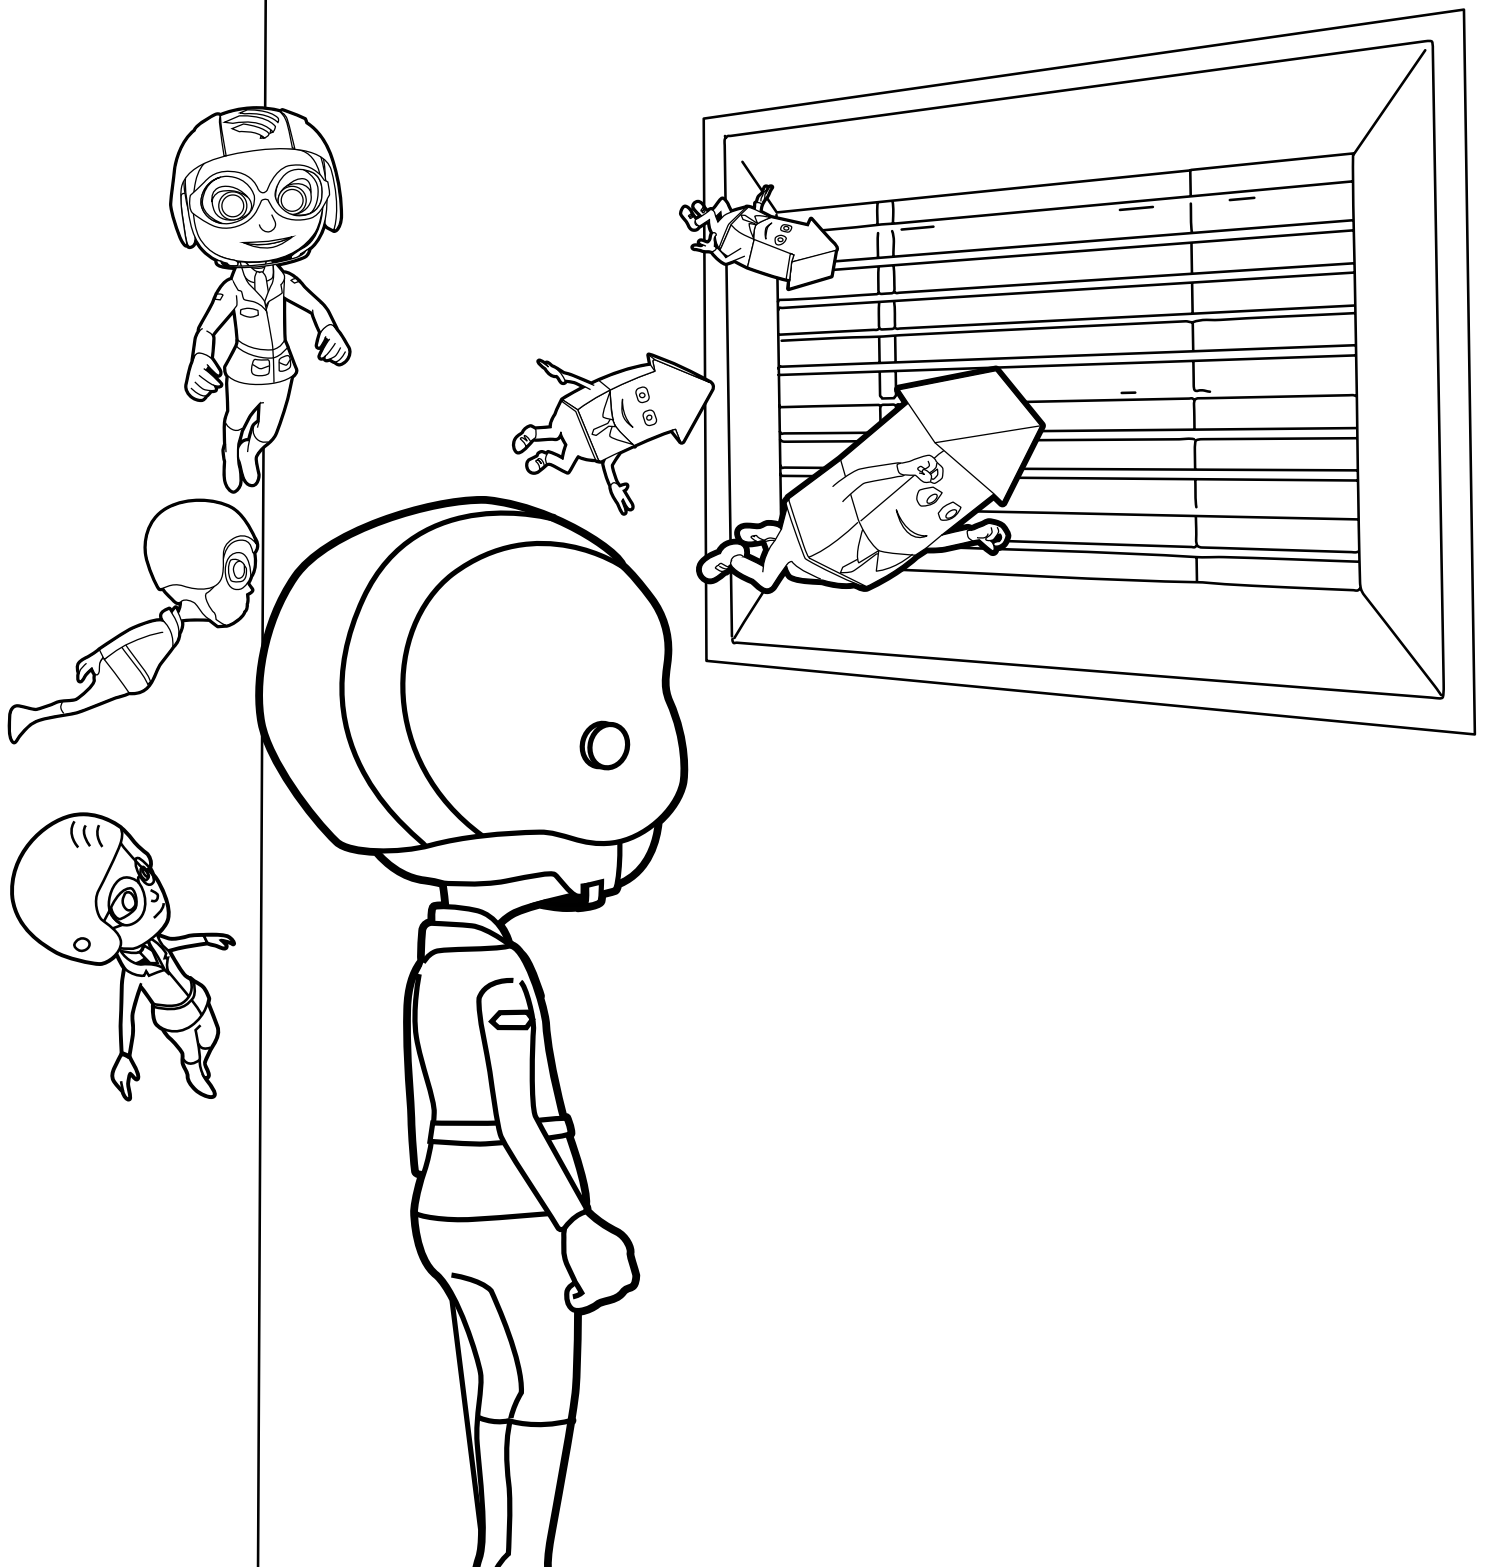

Let's cool off
this house!

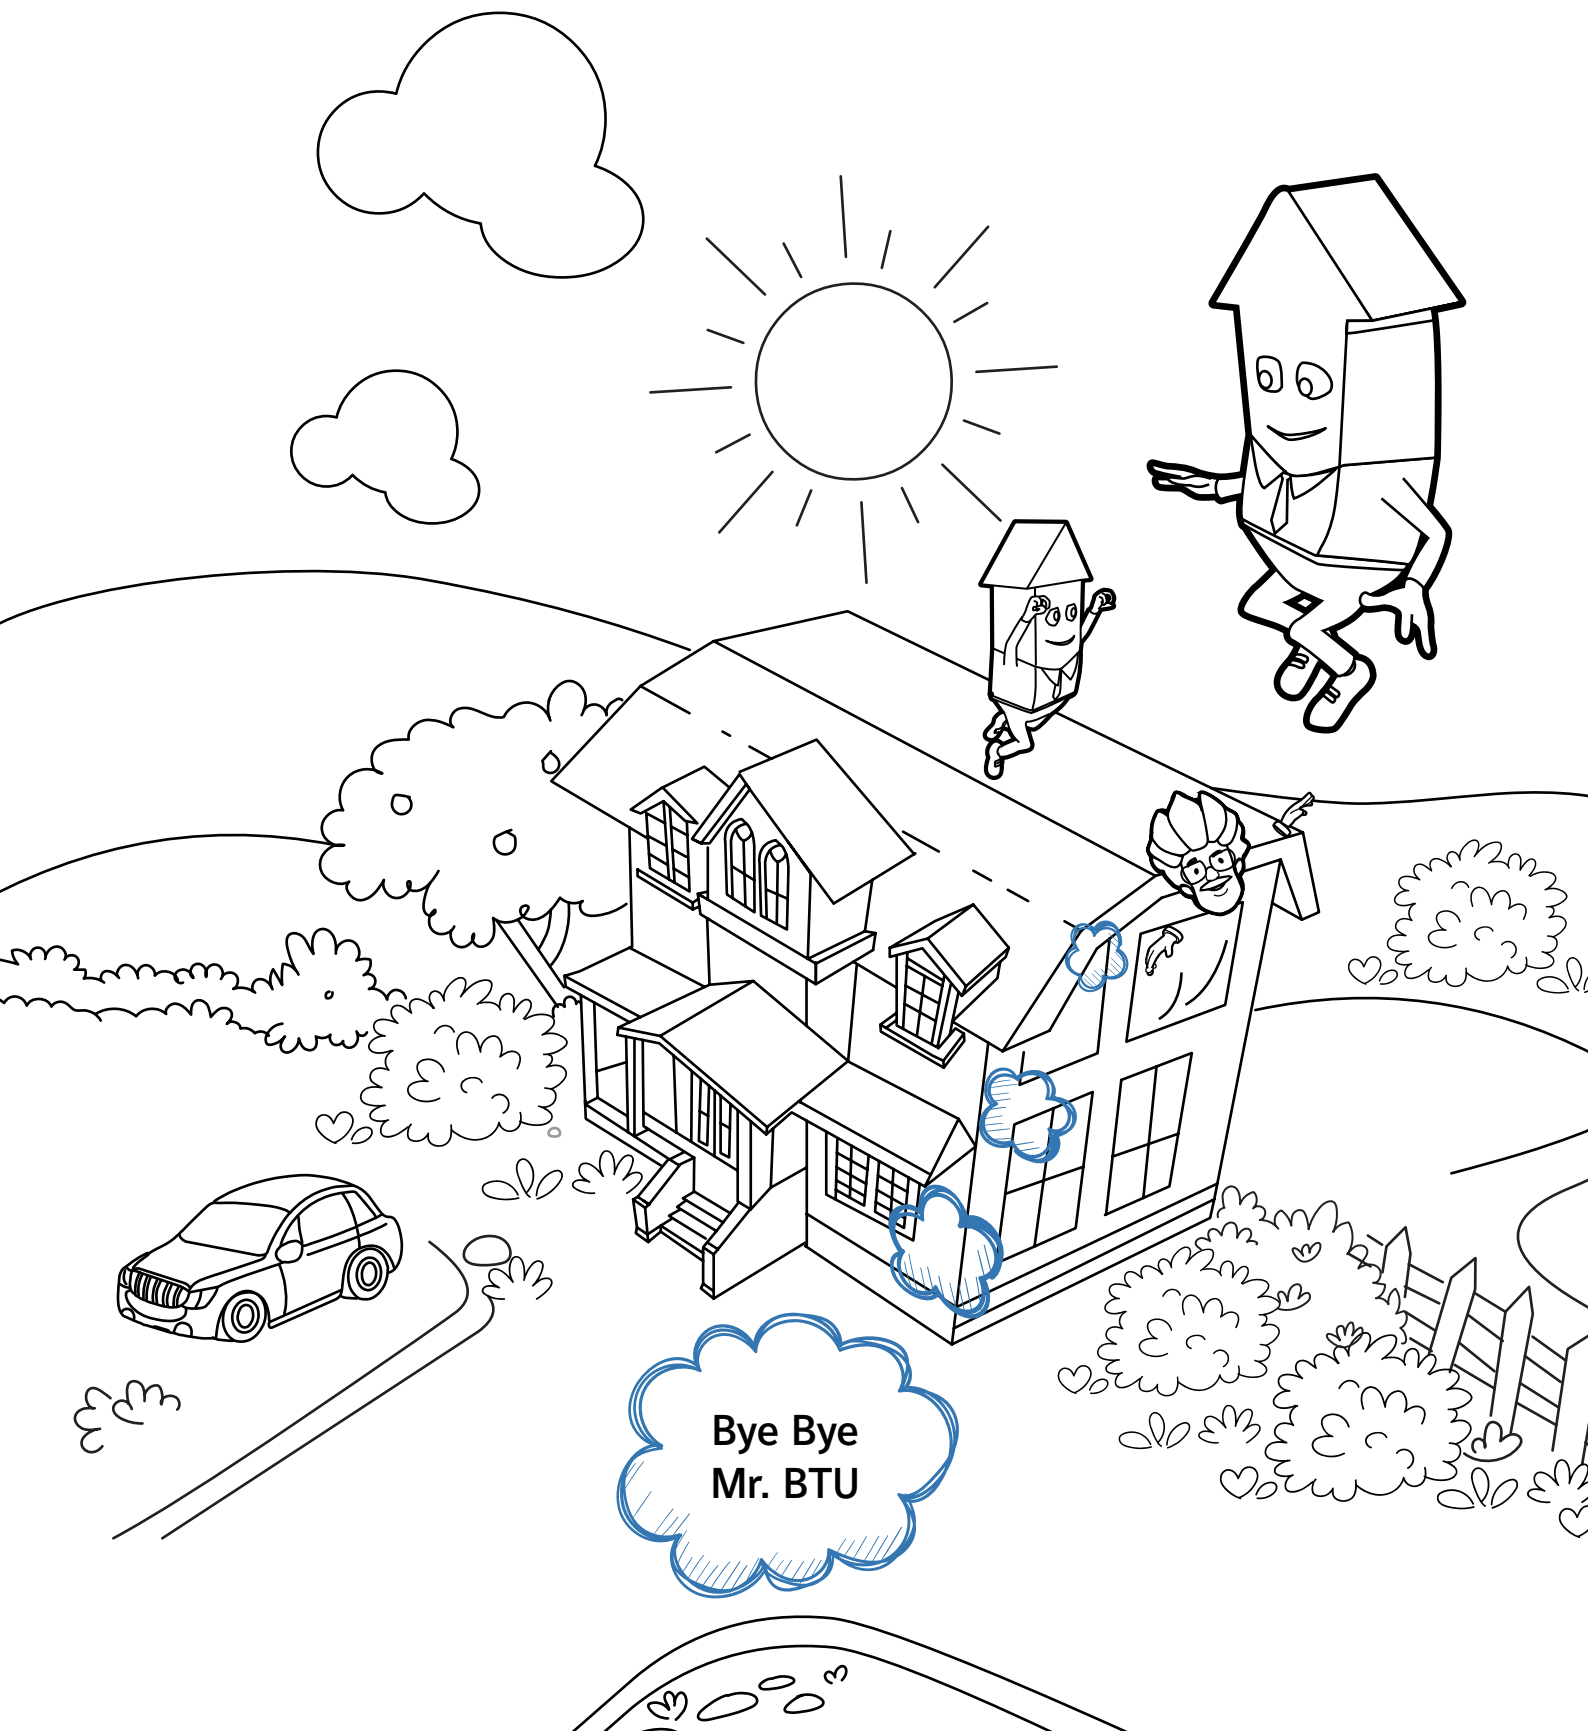

Let's get that cold
refrigerant to the
inside unit!

Amelia and the team comes into the room through the supply grill, shooing Mr. BTU and his friends toward the return duct.

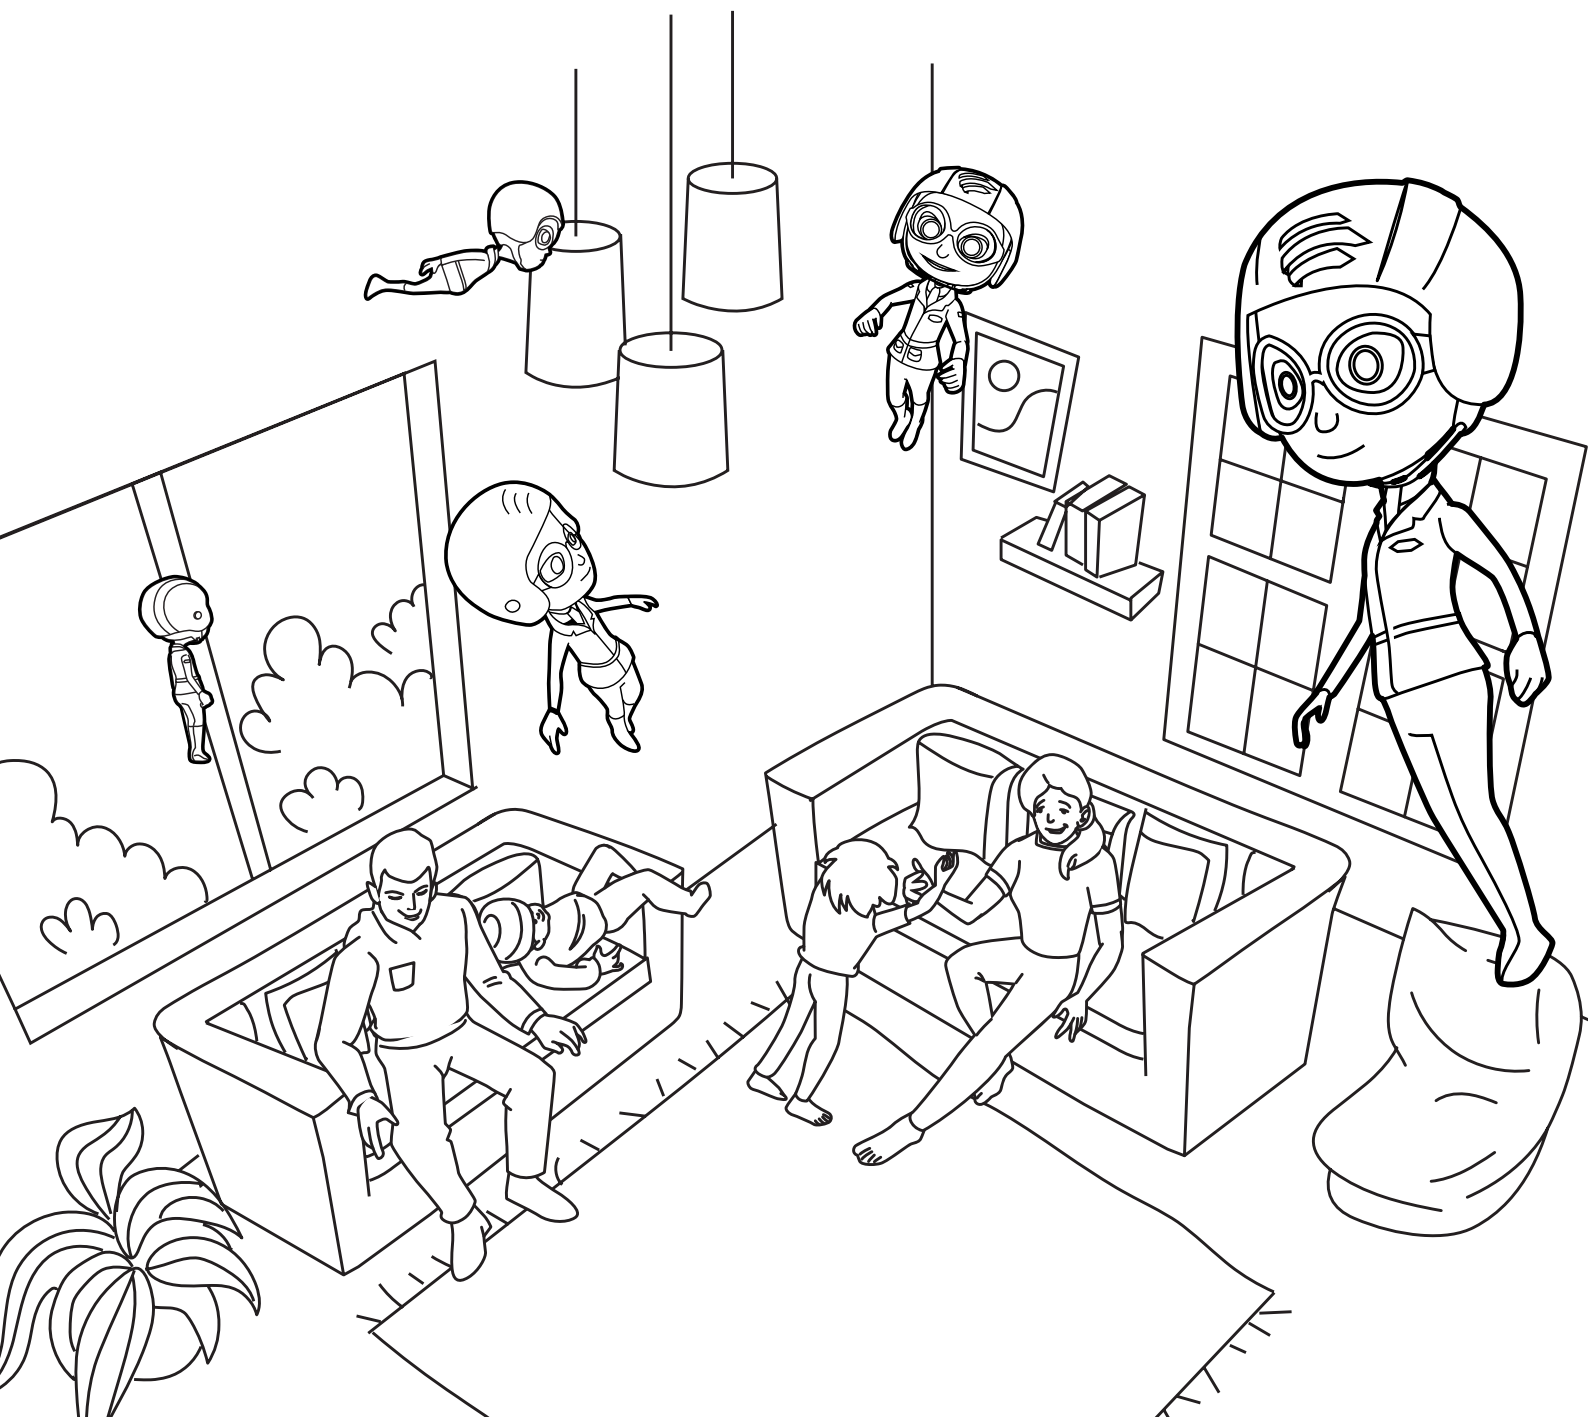

The family starts to perk up.

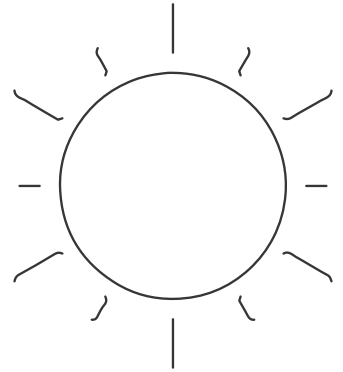

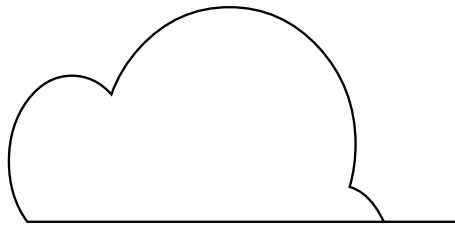

Bye Bye
Mr. BTU

Amelia and her Amelians head back to the fan to be cooled more by Prof. Frio.

"Mission accomplished!
Summer at the Johnson's is
really cool."
