

Asia Pacific Fact Sheet

Johnson Controls serves customers in the Asia Pacific through an extensive branch network and broad manufacturing footprint, spanning over nearly 400 branches, 42 manufacturing plants, 6 distribution centers and 5 major technology centers. The company's footprint in China includes 17 manufacturing plants, 3 research and development facilities, almost 100 branches, 9,000 employees and channel partners across 200 cities. The company was recently recognized for its capabilities in China with the "Top Employer China" award for the sixth consecutive year.

Smart buildings

Johnson Controls is committed to helping buildings reduce their environmental impact in the Asia-Pacific region. In August 2016, the company helped Chengdu IFS achieve the first LEED EBOM (Existing Buildings: Operations & Maintenance) certification in Southwest China. The complex includes a shopping mall, office buildings, a hotel and luxury residence and is designed to achieve energy efficiency 35 percent higher than average.

In early 2014, Johnson Controls opened a US\$35 million expansion of its manufacturing and research and development center in Wuxi, China. The campus and its engineering center is now one of Johnson Controls' largest R&D centers in the world for building heating, ventilation and air conditioning systems.

As China drives toward energy efficiency and security, Johnson Controls' Buildings business is well-positioned to grow its product offerings, as well as energy efficiency and sustainable building solutions.

Opening in 2017, the Johnson Controls Headquarters Asia Pacific will house more than 1,200 employees and is set to receive China's Three Star Green and LEED Platinum building certifications. The headquarters, located in Shanghai, China, has already been awarded the first design-phase EDGE certification for an office building in China from IFC-World Bank. It is expected to deliver 44 percent total energy savings, 42 percent water savings and 21 percent embodied energy in materials savings.

Energy storage opportunities

As the global leader in automotive batteries, Johnson Controls is well-positioned to help the Chinese automotive industry grow by offering solutions to meet increasingly strict fuel efficiency and emissions regulations.

The company's automotive battery business has 14 million units of capacity to serve the China market, with more than 1,000 employees in two plants.

In May 2014, Johnson Controls signed a long-term automotive battery supply agreement with SAIC Motor Corporation Limited (SAIC Motor), a further indication of Johnson Controls' commitment to expand rapidly in the Chinese market.
