

CONTINGENCY COOLING PLANS

# Reduce risk and conserve capital

# Depend on contingency

When thinking of the reason for having a contingency plan of any kind, the first goal that comes to mind is to avoid failure. Contingency cooling plans help in the event of a cooling crisis to minimize downtime and risk. Yet, renting cooling equipment isn't only for emergency situations. In today's challenging economy, many companies tempt fate by running equipment in a "run-to-fail" mode. Contingency cooling plans are a proactive approach that allows companies to save money without risk to operations.

## Take charge of chance

Critical environments like yours need the reduced risk and peace of mind provided by redundancy cooling. In the event of a cooling crisis, time is critical. With a contingency cooling plan in place, businesses are up and running quickly, minimizing downtime. When a primary or back-up system fails, portable equipment can provide redundancy cooling during restoration or in a "standby mode".

## Not just for emergencies

In addition to minimizing risk and maximizing peace of mind, rental cooling equipment provides a solution that allows companies to preserve capital and increase efficiency. When capital budgets are threatened, renting cooling equipment provides access to the newest, most efficient HVAC technologies without making a long-term financial commitment to purchase. It also helps businesses to conserve capital instead of purchasing equipment that may only be used at certain times of the year and sits idle when not in use. Contingency cooling plans allow you to design for the majority of applications while planning for exceptions.

## A variety of solutions to provide peace of mind

In addition to addressing potential capital constraints and recovering from an emergency breakdown, a contingency cooling plan can provide value in a number of other situations – whether the business need is planned or unplanned, short- or long-term, including:

- Seasonal heat waves, natural disasters or peaks in business
- Taking a chiller offline for routine maintenance while operations continue
- Delays when waiting for new chiller equipment to be installed

Contingency cooling plans can also reveal opportunities to further improve the bottom line such as, energy efficiency improvements, eliminating unforeseen maintenance and repair expenses, guaranteeing uptime and maintaining control and flexibility. A comprehensive contingency strategy puts planned responsibility for chiller uptime and performance squarely on the shoulders of an expert supplier, allowing you to concentrate on your business.

Contingency cooling plans can help a wide range of markets including, but not limited to:

- Airports
- Arenas/convention centers
- Chemical plants
- Data centers
- Food sales
- Government
- High-rise apartments
- High technology
- Hospitals
- Industrial plants
- Large commercial
- Life sciences
- Medical clinics
- Office buildings
- Pharmaceutical
- Schools, colleges and universities
- Shopping malls
- Small commercial
