MASTER YOUR ENVIRONMENT.

# THE WORLD'S SMARTEST BUILDING AUTOMATION SYSTEM

Johnson  
Controls 

## DO MORE FROM MORE PLACES

No other system offers more control and access to the information you need. And recent enhancements make *Metasys* more capable and secure than ever. You'll get more out of your equipment, people, investments and your bottom line.

## IT WORKS SMARTER, AND SO DO YOU

The *Metasys* user interface works like you do. Navigate by space to see a real-time view of a single floor or even a single office and the equipment that serves it. Filter data to quickly see information that's important to you. Access graphics to see a visual representation of mechanical equipment and floorplans.

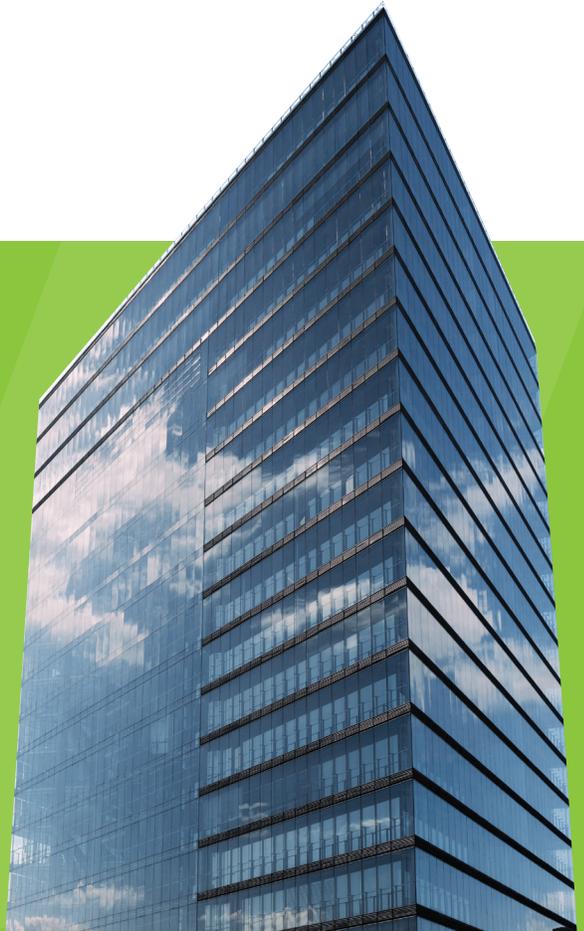

Because the user interface is mobile-optimized, you can manage building operations from anywhere, anytime on any device.

[TAKE A TOUR](#)

## SMART BUILDINGS DELIVER SAVINGS

*Metasys* makes your building smarter and more efficient. It connects your HVAC, lighting, security and fire protection systems, and gets them all "talking" to each other in a common language, on a single platform to give you information you need to make better decisions, save money and improve the way your building functions.

*Metasys* helps organizations like yours save money and energy.

# DATA BECOMES INTELLIGENCE

## INFORMATION

As it controls equipment, *Metasys* also collects critical data, which it turns into powerful information you can use to make decisions about your energy and operations strategies.

## VISUALIZATION

The user interface presents information in a simple, intuitive way to help you quickly identify potential problems. So trouble-shooting is simpler, and order is restored in less time.

## OPTIMIZATION

Even more information is available through powerful energy analytics to analyze *Metasys* data stored on premise or in the cloud. This information is also accessible anywhere, on virtually any device.

## COMPATIBLE WITH OTHER SYSTEMS

*Metasys* integrates your equipment, whether from Johnson Controls or other manufacturers. It works with existing devices and new installations for seamless connection and interaction within a building's systems, precise energy management and ease of use.

## SMART TODAY, SMARTER TOMORROW

Today's *Metasys* is our most advanced system ever. And Johnson Controls strives continuously to find new ways to make it work better, and help you work smarter. We're constantly innovating to make sure its software, user interface, monitoring and analytics are the best available. Now, and in the future.
