

# Johnson Controls Airside Technical Services

Technical and mechanical support  
for critical airside applications

*Installation, Modification,  
Retrofit and Renewal*

## 50 years of technical expertise

Johnson Controls Airside Technical Service (ATS) provides the hands-on technical and mechanical support that keep critical airside product applications running. And in addition to a full range of replacement or retrofit airside parts and components to restore your system to health, ATS can rebuild or refurbish equipment, extending its life and providing substantial savings to your customer.

Airside Technical Service works closely with the Johnson Controls family of products as well as products from other national firms, focusing on complex total-system projects in all aspects of the heating, ventilating, air-conditioning, and refrigeration industry.

---

## Technical and Mechanical Services

### Technical support material archive

- YORK®, Miller-Picking®, Gamewell®, Pace®, and Brod & McClung®, from 1961 to the present.

### Equipment installation/rigging

- Working supervision of knockdown, reassembly and installation for turnkey field installation
- Start-up and commissioning on all airside product brands

### Field testing

- Certification of leakage and deflection
- Fan balancing

### Modifications to new air handlers/refurbishment of older air handlers

- Custom modifications at our shop
- On-site modifications available
- Extends the life of HVACR equipment and provides substantial savings compared to equipment replacement costs

## Airflow and water-flow analysis

- Evaluate existing systems to provide the information necessary to properly balance the system to original design specifications

## Start-up and commissioning of air handlers, VRF systems and VFDs

- Improve equipment reliability and acoustics

## Training

- Tailored technical training including operation and maintenance specific to your customers' HVACR needs

## Inspection audits

- Provides your customer with an understanding of both potential cost savings and energy-efficient HVAC system operation

---

## Products for enhancement, renewal and retrofit of air handlers

### Aftermarket parts

- Product enhancements to improve efficiency
- System repair and renewal parts

### Energy-recovery wheels

- Energy savings
- Humidity control

### Coils

- Replacement and retrofit coils for water, steam and refrigerant
- Toll-free coil hotline 888-880-2645

### Fan flow-measurement

- Retrofit existing fans with accurate flow-measurement station
